

Aqua-Net®

AQUANET CHILDPROOF DESIGN

Aqua-Net® designed the original pool safety net in 1972 and introduced the product to pool owners worldwide.

Our safety net complies with the United States A.S.T.M. standards for pool safety nets (F1346-91)

- The Aqua-Net® system is designed in such a way that it is only possible for an adult to remove the net.
- The pre-shrunk net mesh of 8cm makes it impossible for even the smallest toddlers' head to go through.
- The special U.V. treated polyethylene braid has a breaking strain of 160 kg per strand.
- A toddler cannot crawl to the centre or climb under the net.
- Pools, ponds and spa's can be fitted with blue or black netting.

FITTING AND REMOVAL OF AQUANET

- A specially designed Central Tension System is operated by eleven pulleys built into the net.
- By simply loosening the tension rope, all the tension is released on the net.
- The net is now ready to be removed with ease.
- To refit, fastening points are replaced in the anchors and the pulley rope pulled, tightening the net from the centre.
- The tension of the net can be adjusted from tight to very tight. The pulley system does not tangle.

AQUANET FLOAT FOR ADDED SAFETY

- The float keeps the net at a constant height above the water level even if the water rises.
- Supports the net toward the centre of the pool.

AQUANET EASI-PLATE ANCHORING SYSTEM

- Self-locking clips, fully adjustable.
- Designed so that children cannot stub their toes or hurt their feet.
- There are no large holes, making the EASI-PLATE system ideal for tiled pool surroundings.
- The EASI-PLATE system will not clog with dirt or dust.
- Construction: stainless steel or glass filled nylon in terracotta, grey, black or beige.

There is no substitute for adult supervision. Never leave your child alone near water!
